# Guide For Coder New To What-Language

What is what-language ? What language is  a programming language a unique one.
As what language's syntax is a bit different from other language it will take time to
Get used to it.

## How to start?

First download the interpreter from https://github.com/what-language/interpreter/releases
Then open command prompt on the same folder with the interpreter. Then make a new
File called app.wlf and write :

tell:
Hello World

And then save it and go back to command prompt and type what-lang app.wlf
You should see it saying Hello World  in  the command prompt.

## Update Guide

To update run what-lang --update and then if it says outdated it will take you to the releases page

## Enjoy !

 We are actively updating this. So new stuff will be added.
